PWL Rental DAF

PCL Rental DAF

Belt Press Rental

Overview

FRC has a wide range of skid mounted Rental DAF systems ready for rapid deployment. Rental FRC DAF units are an excellent option for temporary shutdowns of the primary treatment systems as well as augmenting systems for additional capacity or permit compliance.

System Options

FRC Rental DAFs are available skid-mounted for quick set-up and operation or as standalone units to be connected to other on-site equipment.

Units are available in flow ranges from 20 - 2,000 gpm (4 - 454 m³/hr) in dissolved air, nitrogen, or gas configurations.

Rental units come with everything required to properly connect and control the DAF system including a feed pump, a flocculator, chemical dosing pumps, controls and much more. FRC Engineers will work with you to make sure your rental is outfitted for your application needs.

Rental Applications

- Emergency situations where permit limits are being exceeded.
- Equipment goes down for maintenance and a short-term solution is required.
- Delays in wastewater plant construction at effluent producing facilities.
- Existing system needs to be replaced and treatment is required during the change-over.
- Short-term or temporary operations
